

IDEATION PHASE

Define the Problem Statements

1. Project Information

Date	11 September 2026
Team ID	Individual Project
Project Name	ServiceNow Based Employee Laptop Request Application
Platform	ServiceNow

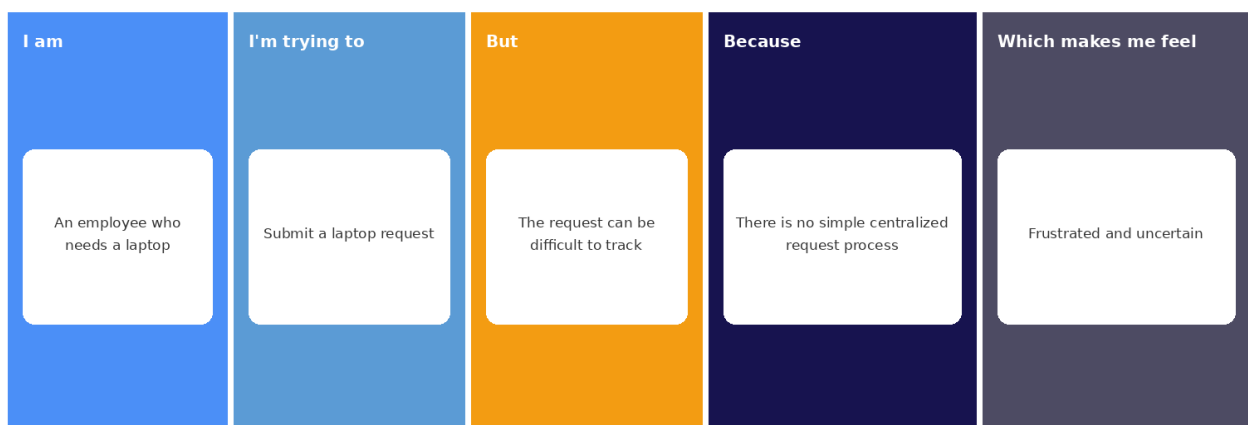

2. Customer Problem Statement

The application focuses on two main users: employees who submit laptop requests and managers who review and approve them.

3. Problem Statement – PS-1: Employee Laptop Request

I am	An employee who needs a laptop
I'm trying to	Submit a laptop request
But	The request can be difficult to track
Because	There is no simple centralized request process
Which makes me feel	Frustrated and uncertain
Complete Problem Statement	I am an employee who needs a laptop. I am trying to submit a laptop request, but the request can be difficult to track because there is no simple centralized request process, which makes me feel frustrated and uncertain.

Customer Problem Statement - PS-1

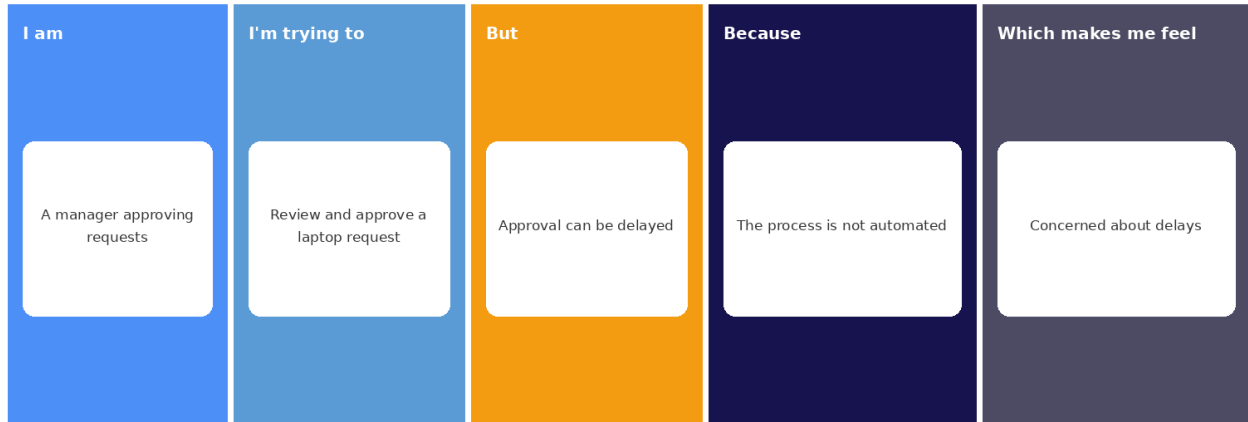

4. Problem Statement – PS-2: Manager Approval

I am	A manager approving requests
I'm trying to	Review and approve a laptop request

But	Approval can be delayed
Because	The process is not automated
Which makes me feel	Concerned about delays
Complete Problem Statement	I am a manager approving employee laptop requests. I am trying to review and approve a laptop request, but approval can be delayed because the process is not automated, which makes me feel concerned about delays.

Customer Problem Statement - PS-2

5. Simple Proposed Process

Employee submits a request → Manager approves or rejects → IT team processes the approved request.

6. Proposed Solution

- Employee submits a structured laptop request.
- Manager reviews and approves or rejects the request.
- Approved requests are processed by the IT team.
- Request status is tracked in ServiceNow.

7. Final Ideation Summary

The ideation identifies two key problems: employees need an easier way to submit and track laptop requests, and managers need a faster and more organized approval process. The proposed ServiceNow application addresses these problems with a centralized request form and approval workflow.

8. Conclusion

These problem statements provide the foundation for developing the Employee Laptop Request Application in ServiceNow, including the request form, roles and ACLs, approval flow, and testing.
