

Project Development Phase Model Performance Test

Date	13-09-2026
Project Name	Service Now Based Employee Laptop Request Application

Model Performance Testing:

Project team shall fill the following information in model performance testing template.

S.No.	Parameter	Values/Screenshots
1.	Data Rendered	The Laptop Request Form displays employee details, department, laptop type, justification, and request status correctly. Submitted requests are stored and displayed in the Laptop Request table. 
2.	Data Preprocessing	The application validates the required laptop request fields before submission. Valid request information is stored in the Laptop Request table and processed through the configured ServiceNow workflow. 
3.	Utilization of Data Filters	ServiceNow list filters are used to view laptop requests based on Request Status, Employee, Department, and Approval Status. This helps users quickly identify and track specific requests.

		  
4.	DAX Queries Used	Not Applicable. DAX queries are not used in this ServiceNow application. ServiceNow list filters and database queries are used to retrieve and manage laptop request records.
5.	Dashboard design	Not Applicable. A separate dashboard is not required for this project. Employees and managers use the ServiceNow forms and list views to manage and monitor laptop requests.
6	Report Design	Not Applicable. A separate reporting tool is not used. The Laptop Request list and record views provide the required information for monitoring submitted, approved, and rejected requests.
